Message from the Chair

Thorsten
Delbrouck

ISF Chair

During 2022, we have seen significant uncertainty affecting the economic environment, our industry and society. Given this challenging backdrop, the ISF has accomplished many goals and as we head into the final year of our current strategy cycle, our focus on relevance, sustainability and growth is serving us well.

We welcomed 68 new organisations to the Membership, and we closed the year having delivered a solid financial performance culminating in 456 organisations being Full Members, 50% of which are Fortune 500 and Forbes 2000 companies, adding new experiences and knowledge into the Membership.

The associated revenue growth, our industry leading retention rates and increasing demand for sponsorship and services have secured a good performance this year while strengthening our market position. The ISF remains in a solid financial position which continues to allow us to deliver our strategy and provides a positive outlook for 2023.

In collaboration with our community of over 25,000 information security

We provided 159 events to support Members’ implementation efforts.

professionals that make-up our Membership, we have been able to deliver a research and development programme to provide the practical and implementable solutions needed to protect your organisation from the emerging and unforeseen threats and challenges you are facing today. I would like to take this opportunity to acknowledge our Members’ contributions to the research, tools and services we have delivered this year. A full list of contributors can be found in the appendix of this report.

In total, 11 research and tool products were launched with strong Member feedback. Our research covered a diverse range of important topics such as: **Threat Intelligence; Measuring Security; Industrial Control Systems; Security Governance** and **Embedding Security into Agile Development**. During the year we also updated the ISF **Aligned Tools Suite**, applied by our Members to assess their information security status, demonstrate compliance with international standards and assure security across their suppliers. It brings together 16 ISF tools and cross reference aids including the **Benchmark**

and **Information Risk Assessment Methodology 2 (IRAM2)** platforms and includes an update to the eagerly awaited **Standard of Good Practice for Information Security (SOGP)**.

We know organisations currently see supply chain disruptions among the top threats to both global and domestic growth, and for our community the threats that take advantage of our large, complex and fast-changing supply chains are increasing. So we were excited to present our new **Supplier Security WebApp** which helps our Members analyse the security status of their suppliers to reduce disruptions and threats to their business. If you have yet to do so, please look into these highly rated deliverables.

We provided 159 events to support Members’ implementation efforts, including our 33rd **ISF World Congress**, which saw just over 1,300 Members (both in person and online) attend. It was great to see so many of our Members, over 67% of Member organisations from 43 countries participated, and we look forward to their continued participation in our future global thought leading initiatives.

Our 33rd World Congress, saw just over 1,300 Members (both in person and online) attend.

A new Advisory Council and Supervisory Board has been elected and will take office for the duration of 2023–2026. I would like to take this opportunity to thank our outgoing Advisory Council members: Anne Reinsnes (Norway), Mark Slatter (UK) and Torben Voight Olsen (Denmark) for their support and dedication while welcoming: Joseph Burkard (US), Jack Krul (Orange), Mark Lomas (UK), Tom Remberg (Norway), Robert Rodgers (UK), Arvid Rosinski (Grey), Hannah Ryan (UK) and Niels Truelsen (Denmark). It is the dedication of these volunteers which help us remain a genuinely Member-led organisation.

I am of course very grateful for the support of my colleagues on the Advisory Council and Supervisory Board and am looking forward to serving in my first year as the elected Chair of the ISF. I will also take the opportunity to thank the ISF team for their continued commitment and dedication during 2022.

We are now looking forward to the year ahead. During 2023, we will be setting our sights into the future by refreshing our strategy to take us to

2026. Diversity and sustainability are crucial to ensuring a fair and liveable future for all and at the ISF we’ve fostered a diverse workforce and inclusive policies for many years. In our new strategy, we will be using the UN Sustainable Development Goals as a reference framework to balance social, economic and environmental sustainability at the ISF, which we hope will make our efforts and achievements more transparent.

I do hope you will continue to take full advantage of everything the ISF offers you and your organisation over the course of 2023.

Our business strategy

The ISF is a leading, independent authority on information security and risk management.

Our strategy will position the ISF for sustainable long-term growth with agility and flexibility, building on a period of sustained investment for our Members and staff, allowing the ISF to continue to be seen as a thought leader in the information security industry worldwide.

The ISF's operating model as an international, not-for-profit organisation, providing impartial knowledge, guidance and practical, implementable solutions to help its Members manage risks to information assets, remains intact. The ISF will continue to develop relationships and collaborate for the protection of information under the existing Member owned, Member-driven model.

Successful execution of the strategy will enhance the overall value proposition for Members by means of:

Relevance

Security and risk functions are going through significant change. This requires the information security professional to work with not just information security functions, but also those responsible for Audit, Legal, IT, Risk and Compliance, Corporate Governance and Policy. The ISF must reflect this change and serve both seasoned professionals and newcomers from the CxO, CISO, CSO to the security practitioner. Individual Member organisation relevance will be enhanced further via a managed service tier for Members with their organisation's cyber programme at the core of this activity.

Sustainability

The ISF is an international Member-owned, Market-led and not-for-profit organisation. Providing impartial knowledge, guidance and practical, implementable solutions for resolving information security and risk management issues via a collaborative and leading infrastructure that supports both Members and ISF employees, will allow the ISF to continue to attract and retain both Members and key individuals. Our people are at the heart of the ISF strategy and by developing capabilities, skills and empowering them to give their best we will create greater engagement throughout the company and a reputation for valuing and respecting our workforce. This will enhance Member value and ensure that ISF employees are regarded as being at the forefront of the information security and risk management industries.

Growth

The ISF serves both Member organisations and the broader information security community. Working with organisations from the F2000 to mid-size, from government to academia, worldwide, the ISF delivers valuable, independent and actionable insight resulting in a growing Membership and sought-after perspective and services from Members and non-Members alike.

Please see **2022 in Numbers** for a depiction of how we're progressing our strategy.

Securing a return on your investment

The ISF provides a unique, professional network of over 25,000 information security professionals.

Our trusted forums, both online and face-to-face, enable confidential interaction based around your topics of interest – as well as focus on local and industry issues – to ultimately identify sustainable best practices that can be implemented with confidence throughout your organisation.

Leverage the network

Participate by sharing your knowledge and experiences with others and gain an inside perspective on how fellow Members are solving business problems and mitigating information risk. Expand your personal contact base to call upon peer support when you most need it and be recognised by your peers as an expert in your field.

Ensure we build products that matter

Contribute to product design and development by suggesting and shaping topics you'd like the ISF to research. Use our social media business platform or attend workshops to enrich our thinking while ensuring our products are practical, relevant and beneficial to you. Influence the outcomes to be sure they meet the challenges you're facing today.

Consult topic experts

Engage with an ISF analyst. Use the ISF's social media business platform to pose questions or gain advice and product support to supplement your implementation efforts. Invite your colleagues from audit, risk, legal, compliance or any other relevant function to join these communities and accelerate the realisations of benefits by gaining business-wide alignment with your initiatives and goals.

Enhance your skills

Improve your knowledge and understanding of topical and complex information security issues and how to set about resolving them by attending ISF events to share practices with fellow Members and learn more about how the ISF can help you manage information risk.

Get tailored insight and on-site advice

Commission an ISF analyst or topic expert for a tailored service. The ISF offers virtual and on-site services to supplement the implementation of our products. These services can be designed around your needs and delivered working alongside your teams to help advance your aims.

Send your global teams to Chapter Meetings

Enhance the global network and capacity of your team to deal with security challenges by attending ISF Chapter meetings. The ISF encourages Members to attend Chapter meetings wherever they're based, irrespective of affiliation, to help build these valuable networks and identify new business opportunities.

Threat Horizon 2024: The disintegration of trust

The 2024 edition of the ISF's annual publication forecasts the most likely information security-related threats organisations will be facing in the immediate future. The report presents nine future threats to information, grouped into three broad themes:

- Well-intentioned regulations have unintended consequences
- Technology choices diminish control
- Dirty data disrupts business

Embedding Security into Agile Development: Ten principles for rapid improvement

This report reflects current trends and modern approaches to secure application development. It sets out ten agile security principles that represent good practice for secure, but agile, development, and recommends a set of actions for applying each principle at three levels: agile programme management, agile projects, and agile iterations.

The Standard of Good Practice for Information Security 2022 (SOGP 2022)

During these unprecedented times, **SOGP 2022** provides timely guidance on ensuring a secure business operating environment across all aspects of cyber resilience, information security and risk management. This latest edition of **SOGP** includes new and enhanced coverage of the following topics: information security practice during mergers and acquisitions, cyber insurance, physical and environmental management, ISO 27002:2022 alignment, endpoint devices and web servers amongst many others.

ICS Insights Series

ICS Insights is a series of papers that will help build a programme that will assist organisations in effectively securing the ICS environment. The first paper is **Organic convergence** which explains what an ICS environment is and how it links to IT and OT. As well as helping to understand the differences in knowledge, skills and responsibilities between the information security and ICS teams.

[Click here](#) to read the second paper in the series, **Understanding threats to ICS**.
[Click here](#) to read the third paper in the series, **Challenging manufacturers**.

Aligned Tools Suite: Assess. Comply. Assure

The ISF **Aligned Tools Suite 2022** brings together 16 ISF tools and cross reference documents. The suite, which is aligned to the latest version of the **SOGP**, includes the recently released **Supplier Security WebApp**, the updated **Benchmark** platform, **IRAM2 WebApp**, **Security Healthcheck** and **SOGP** cross references.

SOGP WebApp

The *SOGP WebApp* is an online version of *SOGP* for easy access of the content across multiple platforms, including mobile. It now contains *SOGP 2022* as a separate version of the content enabling users to access both the 2020 and 2022 versions from within the same application.

Threat Intelligence:
React and prepare

The ISF produced the original, *Threat Intelligence: React and prepare* report in 2017, with a view that whilst the capability could provide value to organisations willing to make the required investment, the reality was threat intelligence remains an unfulfilled promise. Since then, threat intelligence has come of age as a technical capability, catching up with expectations. This revised report helps organisations to develop and maintain an effective threat intelligence capability, that helps leaders to understand threats the organisation faces and make well-informed decisions about how to address them.

Supplier Security WebApp:
Assess your suppliers with ease

The ISF *Supplier Security WebApp* equips security practitioners with a simple and intuitive tool designed to meet the challenges of managing supply chain risks. Drawing on over a decade of supply chain best practice, the *WebApp* is designed to help you analyse the security status of your suppliers in an easy-to-use, robust and repeatable format.

Nurturing Security
Governance:
Becoming effective
through engagement

This report helps organisations to establish an information security governance programme that steadily improves in maturity, helping the business to better manage its risks. It does this by:

- describing the internal and external pressures that shape governance
- introducing six components that underpin an engaged and effective governance programme
- exploring the capabilities found and actions required at five levels of governance maturity.

Measuring Security:
Insight through data

This report helps security practitioners to understand and answer stakeholder questions by providing insight backed by data. The report:

- provides definitions and explanations of relationships between different types of security measurement
- explores what can be measured
- introduces the measurement cycle and demonstrates how it can be applied through a selection of case studies.

ISF – Secure, resilient, confident

The challenging macroeconomic and geopolitical backdrop continues to challenge organisations and it is difficult for many businesses to predict the shape of future trading with certainty. We understand the transformation many organisations are having to make and remain determined to continue to offer the support our Members need during 2023.

Effective and agile management of information risk has never been as critical as it is today. Most organisations struggle to achieve this due to lack of time, resource or in-house expertise.

In response to this, the ISF provides award-winning consultancy services, training and certifications and professional support activities that supplement the implementation of ISF research and tools, to all Member organisations. We ensure you have access to the right tools so that you will be able to detect, respond and resolve ongoing and emerging threats to protect the future of your business.

Building on over 30 years of information security expertise, the ISF's products and services supports you to:

- identify and manage **information risk** now and in the future
- manage **compliance** across multiple regulations
- assure **supply chains**
- maintain a **business-aligned** information risk management capability
- be more resilient to **cyber attacks**
- demonstrate a return on cyber security **investments**.

Identify and manage information risk now and in the future

Challenge

As businesses continue to react to the global landscape in light of significant economic pressures, many organisations are shifting working practices to more flexible models, including greater reliance on remote working technologies. As both organisations and individuals adapt to this way of working, cyber criminals and other malicious actors are exploiting weaknesses in hastily adopted products and preying on individuals' insecure actions in order to gain the upper hand.

Opportunity

One of the first steps in securing newly transformed environments should be a full information risk assessment to identify any gaps in arrangements. **IRAM2** offers a simple, practical, yet rigorous approach to identifying and assessing risks in a target environment. It is fully supported by the **IRAM2 WebApp** which enables organisation's systems to be identified in terms of their criticality to the business, and then protected in line with that criticality. With a focus on the business perspective, any available resources can be maximised in order to bring overall risks down to an acceptable level.

Manage compliance across multiple regulations

Challenge

Emerging technologies and related information security trends are key drivers for regulatory change. Yet legislative development continues to lag behind the speed and scale of technological innovation. Reducing costs will remain a key priority for businesses during 2023 but even so, organisations are obliged to account for existing and potential legal issues, and pro-actively implement appropriate security practices to protect information, systems and processes. The ISF offers an affordable solution to help Members stay ahead.

Opportunity

The **Legal and Regulatory Implications for Information Security** report provides a comprehensive analysis of legal and regulatory implications for information security by:

- presenting over 400 different pieces of legislation that impact information security
- outlining elements of European Union laws
- highlighting legal issues related to emerging technologies and trends.

The ISF Services team can help your company to use **SOGP** as the basis for an updated set of policies, procedures and guidelines that meet the requirements of your auditors, regulatory bodies and business needs.

Assure supply chains

Challenge

We know organisations currently see supply chain disruptions among the top threats to both global and domestic growth, and for our Members, the threats that take advantage of our large, complex and fast-changing supply chains are increasing. Budgets are strained as the economic downturn starts to bite. This extends to procurement, and businesses are under pressure to seek services from suppliers who can offer ‘more for less.’ In response, even well-established suppliers will trim out as much cost (and potentially information security) as possible in order to protect margins. Heightened information risk exposure is an inevitable consequence.

Opportunity

The new **Supplier Security WebApp** will help you analyse the security status of your suppliers and help reduce disruptions and threats to your business. You can use the **WebApp** to:

- create and store key supplier security details in a single, central location
- build tailored supplier security assessments based upon a wide range of security controls
- add your own questions to assessments for further flexibility
- automate supplier access to security assessments
- evaluate, monitor and review the security posture of suppliers based on assessment results.

Maintain a business-aligned information risk management capability

Challenge

Organisations are increasingly dependent on technology and digitalisation, with many accelerating great change to the way they conduct business. Organisations need to understand and manage the increased levels of information risk that has been introduced in order to deliver on their strategic objectives and stay competitive in this new environment.

Opportunity

In response to Members’ growing needs for assistance with how to better engage with senior stakeholders, report and communicate around information risk, and document the business value of the security and risk function, the ISF has established the Risk Transformation Practice to help organisations identify, build, and maintain a business-aligned information risk management capability.

The ISF works with Members via a structured approach by using purpose-built tools to build a comprehensive view of how the information security and risk management function contributes to the achievement of key business objectives.

Be more resilient to cyber attacks

Challenge

Fuelled by new technologies and opportunities, cyber attacks are steadily increasing year on year and will continue to grow. Organisations are constantly under threat and consequently, cyber security preparedness and resiliency are becoming increasingly important to the protection of an organisation’s information.

Opportunity

One way of improving the ability to handle cyber attacks is by running cyber security exercises. ISF **Cyber Security Exercises** immerse your team in realistic, tailored scenarios, testing your organisation’s ability to detect, investigate and respond to cyber attacks in a timely and effective manner. It will enable you to:

- identify vulnerabilities in your attack response across people, process and technology
- develop procedures for agile and structured cyber attack response
- increase awareness among key stakeholders about the nature and scale of cyber attacks
- effectively stress test your organisation e.g. following a re-structure, merger or acquisition.

Demonstrate a return on cyber security investments

Challenge

As the COVID-19 pandemic comes to an end, so too will the expansive economic support funded by governments across the world. Businesses who have furloughed staff, held off on investments, or even hibernated entire functions, will all have to take tough decisions as to how to spend what little money they have in reserves and will need to demonstrate any existing or associated investments. Within cyber security, budgets will be cut as businesses invest money elsewhere to drive revenue back to pre-pandemic levels. With a reduced budget, security leaders will have to make tough choices on how and when to prioritise the funds available to them.

Opportunity

Managing cyber security budgets has often been a challenge for security professionals, who are used to dealing with limited budgets and demands to demonstrate return on investment. At the forefront of these tools is **Benchmark**, a controls assessment platform designed to highlight an organisation’s strengths and weaknesses across a variety of cyber security domains. These strengths and weaknesses can be used to demonstrate areas for targeted investment, as well as the impact of this investment on an organisation’s cyber security posture. With results shown across six industry-leading standards and frameworks, and the option to compare data against industry peers, it has never been easier to target effective security spend and demonstrate a return on investment.

Financial report

The ISF enhanced its financial position, closing 2022 with strengthened reserves. 68 new Members were acquired over the period, closing the year with 456 Full Members.

This table provides an extract from the 2022 audited financial statements.

	2022 (£000's)	2021 (£000's)
Revenue/Income	12,903	11,235
Bank interest	109	1,282
Surplus/(deficit)	447	1,244
Fixed Assets	149	152
Other Debtors	1,195	1,214
Trade debtors	2,647	2,493
Cash at bank	14,156	13,225
Total Assets	17,998	16,932
Creditors: amounts due within one year	(8,711)	(8,321)
Net Current Assets	9,287	8,611
Total assets less current liabilities	9,437	8,763
Net assets	8,823	8,376
Capital & reserves Profit & Loss account	447	1,244
Member's Reserve Funds	8,823	8,376

Message from the Chair

Our business strategy

Securing a return on your investment

2022 in numbers

Showcasing major products and services

ISF – Secure, resilient, confident

Financial report

ISF World Congress 2022

Appendix

About ISF

Founded in 1989, ISF is an independent, not-for-profit association of leading organisations from around the world. ISF is dedicated to investigating, clarifying and resolving key issues in cyber, information security and risk management and developing best practice methodologies, processes and solutions that meet the business needs of its Members.

ISF Members benefit from harnessing and sharing in-depth knowledge and practical experience drawn from within their organisations and developed through an extensive research and work programme. The ISF provides a confidential forum and framework, which ensures that Members adopt leading-edge information security strategies and solutions.

By working together, ISF Members avoid the major expenditure required to reach the same goals on their own.

ISF Services

Consultancy services are available to support the implementation of ISF products.
