

IRAM₂ MEMBER CASE STUDY

Information Technology service provider and telecommunications company for corporate customers, government institutions and private individuals

Challenge

- Inconsistent view of risk
- Only targeted components that handled Personally Identifiable Information (PII)
- Lack of support from the business

Solution

- Attending **IRAM₂** training accelerated and standardised understanding
- Removed subjectivity and enhanced trust and assurance in the risk reports
- Tailored security controls to produce a more familiar set of risk treatment options for both developers and stakeholders

Member recommendations

- Start **IRAM₂** implementation programme by adapting the process to align closer to the organisation's core services
- Adopt a phase-by-phase approach and avoid deploying all phases of **IRAM₂** if the organisation lacks the necessary experience
- Assign an '**IRAM₂** champion' to promote the methodology across the organisation and feed back any recommendations to the information security function (or equivalent) to assist with the roll-out of **IRAM₂**

To find out more about how **IRAM₂** can help your organisation please visit the [IRAM₂ Community](#) on **ISF Live** and email iram@securityforum.org if you have any questions.
